Picture Quality Face-Off

Both Insignia F50 TVs use edge-lit LED panels with 4K UHD resolution (3840×2160) and support HDR10 and HLG. Typical peak brightness sits around 250-300 nits, which works well in dim-to-moderate lighting but can look washed out in bright rooms. Color coverage is about 70% of DCI-P3, giving decent saturation for everyday viewing.

The LG LX7B employs Mini LED backlighting with local dimming zones, pushing peak brightness to roughly 600-800 nits and improving contrast ratios. LG claims a wider color gamut (up to 90% DCI-P3) and better HDR handling, especially for HDR10+ content. Its matte white frame reduces ambient-light reflection, enhancing perceived contrast in well-lit spaces.

Finding the Right Size for Your Room

Use the simple rule: optimal viewing distance (in inches) ≈ screen size × 1.5 for 4K TVs. For a 50\" screen, sit about 6.25 ft away; a 75\" screen works best from roughly 9.4 ft; a 55\" screen is ideal near 6.9 ft.

If your seating is closer than these distances, opt for the smaller size to avoid eye strain; if you have a large open-plan living area, the 75\" Insignia delivers a cinema-like feel without exceeding budget.

Which TV Should You Buy?

If your priority is the lowest price and you have a modest-sized room, the **Insignia 50\" F50** gives solid 4K picture and Fire TV smarts for under $160. Grab it now.

For a bigger screen that still feels affordable, the **Insignia 75\" F50** provides a theater experience for under $360—great for basements or large living rooms. See the deal.
